

This project tells the story of a business that wants to **understand its sales performance from every angle**.

At the center is the **Sales** table — every transaction that happened: who bought, what they bought, when they bought it, where it was sold, how much quantity, discount, and revenue were generated. This is the heartbeat of the business.

Surrounding sales are the **dimensions that give meaning to numbers**:

- **Date** adds time intelligence, helping track trends by day, month, quarter, year, and fiscal year.
- **Product_Details** explains *what* was sold — brand, category, subcategory, and product name.
- **Customer Details** reveals *who* the customers are — their age, gender, and segment.
- **Region** shows *where* sales happened — city, state, and country.
- **Returns Fact** captures the *after-sales story* — which sales were returned, when, and why.

Together, this star-schema model enables the business to answer powerful questions:

- Which products drive the most revenue?
- Which regions and customers perform best?
- How do sales change over time?
- Where are returns impacting profitability?

In short, this project transforms raw transactions into a **clear, decision-ready business story** using a clean, professional Power BI data model.

Segment		Sum of Revenue		ProductID			ProductName			Subcategory		
Gold			95597	1	Product 1		Shirt					
Platinum			93893	2	Product 2		Mobile					
Silver			97436	3	Product 3		Jeans					
Total			286926	4	Product 4		Sofa					
				5	Product 5		Mobile					
				6	Product 6		Laptop					
				7	Product 7		Table					
				8	Product 8		Table					
				9	Product 9		Laptop					
				10	Product 10		Sofa					
				11	Product 11		Laptop					
				12	Product 12		Table
